Trans. of Vysokomolekulyarnyye Soyedineniya (USSR) 1959, v. 1, no. 2, p. [324-329].

Polyethylene terephthalate was used to observe the uniaxial deformation of film in the glassy condition and of crystalline films. It was shown that the formation of the so-called "neck" which can take place in "cold stretching" of crystalline and in forced-elastic deformation of amorphous polymers is governed not by phase changes but has a purely relaxation character. The results obtained can be interpreted on the basis of the assumption of a "packet" structure of the crystalline and the amorphous polymers developed by Kargin, Kitaigorodskii and Slonimskii (Kolloid. Zhur. 19: 131, 1957) (Author)

On the basis of the etching method used there were shown optical and electron microscopic studies of structures of microspherulites occurring in films of polyethylene sebacate obtained from solution. The separate coexistence in the microspherulite of polyethylene sebacate of crystalline and amorphous phases was established. The crystalline phase of the polymer is constituted of a helical-ribbon shaped packet of polymer chains composing the structural elements of the microspherulites themselves. The amorphous phase of the polymer consists of globular shapes not

THE SOLUBILITY OF SOME GRAFTED COPOLYMERS. [1961] 10p. (3 figs. omitted) 9 refs.
Order from LC or SLA mi$1.80, ph$1.80 61-10990

Trans. of Vysokomolekulyarnyye Soyedineniya (USSR) 1960, v. 2 [no. 10] p. 1580-1585.

The state diagrams were studied of a series of grafted copolymers of diphilic type (starch-polystyrene, polyethylene terephthalate-polyacrylic acid) and grafted copolymers containing starting component having common solvents (polyisobutylene-polystyrene, polystyrene-polyvinyl acetate). In all cases the grafting causes lessening of the true solubility of the grafted copolymer as compared with the starting homopolymers. For the grafted copolymer from polystyrene and polyvinyl acetate the dissolution process is described by means of thermodynamical functions on the basis of data on integral mixing heat with benzene and hydrogenated monomers.
